

Tips for Radar and the Encyclopedia

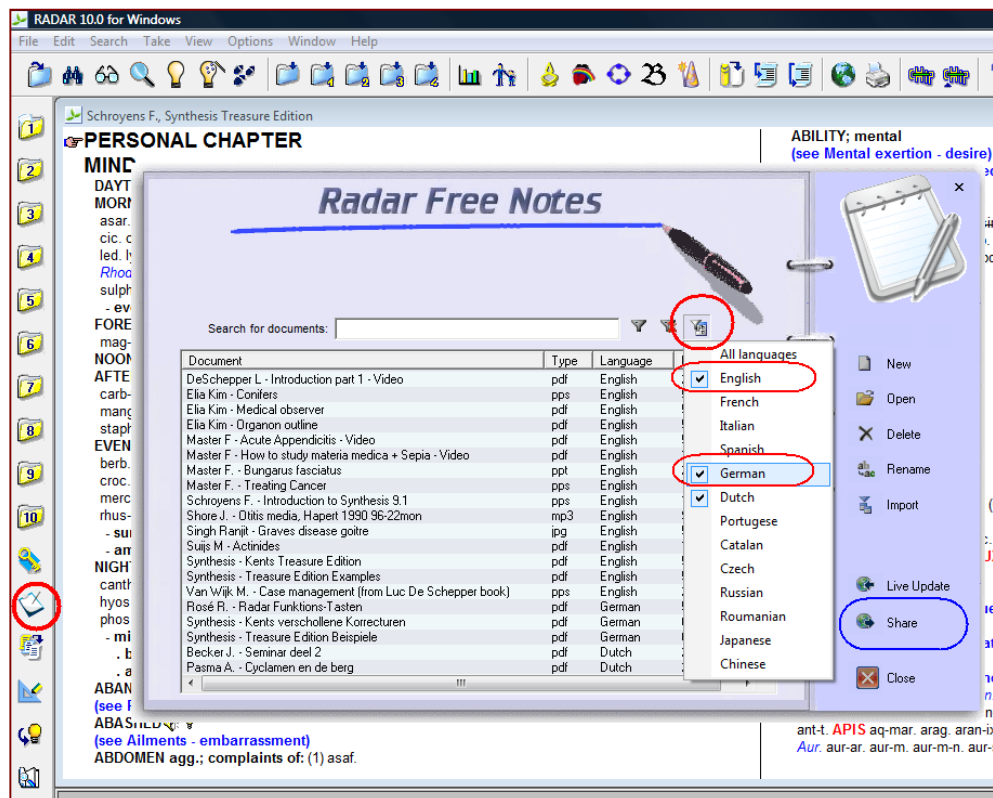

(Jan 2008)

The Radar Free Notes: Download + Upload

In the Free notes window, you can select only those Languages you want to see.

It is also possible to upload personal information (for example if you have a very interesting case with good follow ups which others can learn from), you can use the Share option, to upload your file.

You can first use the 'Import' option, to import any of your personal files: Text, Video, PowerPoint. Then send to all users via the 'Upload' button.

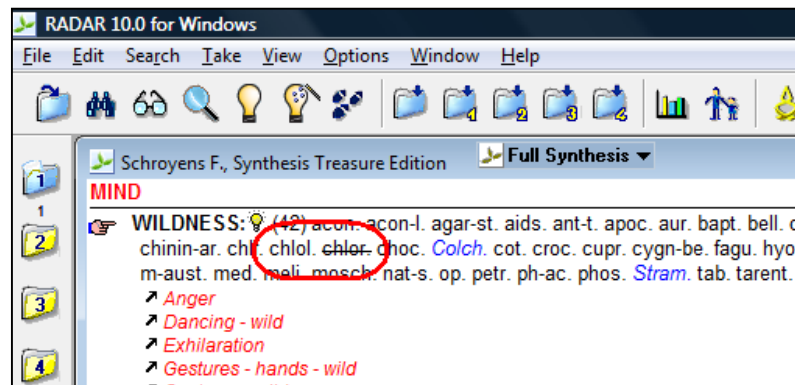

Removed / Corrected remedies

New with the recent Radar 10.00.21 (Live Update) are the 'Strike-through' remedies.

These are 'removed' remedies.

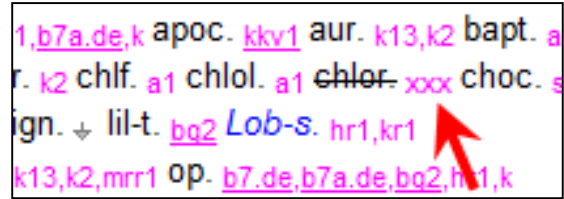

Sometimes it will be immediately clear what has been changed. In this example the wrong abbreviation **chloR**,

has been replaced by **chloL**, which is easily verifiable if you search in EH on the word 'Wildness + one of these Remedies'.

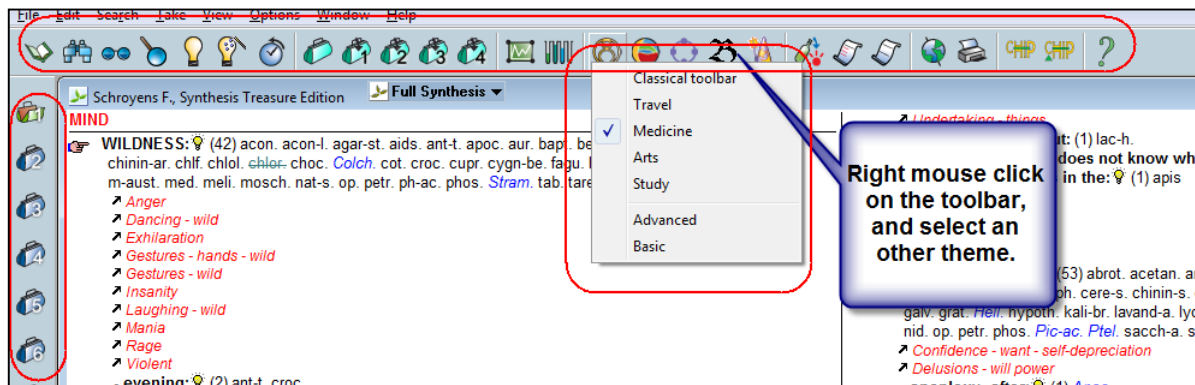

You can turn on the Author references with the key combination: **‘Contr+Shift+F3’**

Remember you can change the color of almost every item in the repertory yourself: Go to the menu **‘Options’, ‘Fonts and Colors’,** and select the item **‘Remedy with Author XXX’**.

Select a Different Toolbar theme.

You can select a different theme of the toolbar by Right mouse clicking on the upper toolbar, and select one of the options.

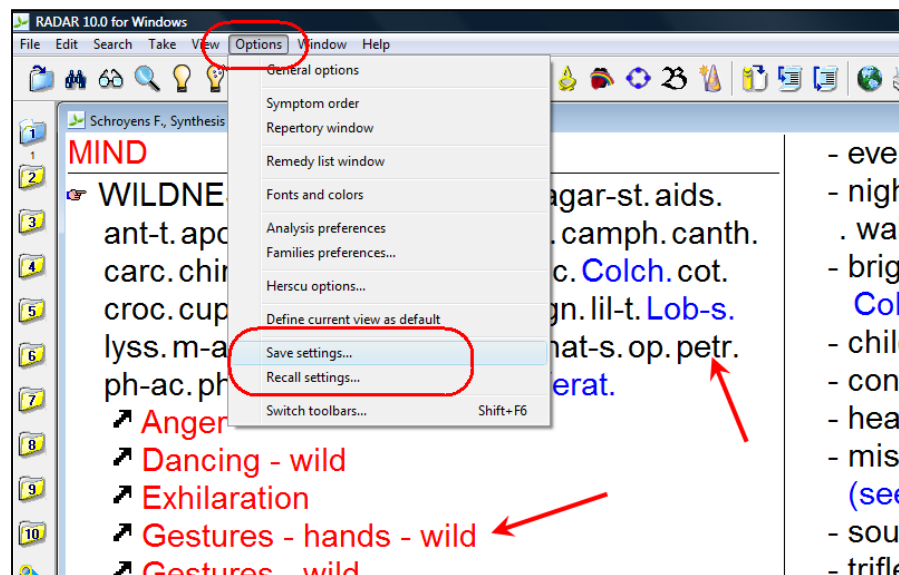

Recalling several personalized Settings (a great Teachers tool)

If you have difficulty reading the small standard font size in the repertory, then it is possible to change all the font sizes (also the colors) of all the items in the repertory. For example if you need to give a presentation to a group, usually Font Size 18-points will be nice. If the group becomes larger, then probably you will need to go up to font size 22-points.

To change the font size, go via the menu **‘Options’** to **‘Fonts and Colors’**. Make your changes, then click on the button **‘Apply’**. Now comes the nice part, you can **SAVE** such a personalized layout via **‘Options’, ‘Save Settings’**. You can Recall them anytime you want, with just a click via **‘Recall Settings’**.

Example of size:
22 points
for lecture purposes.

Of course you can also increase the font size only a little bit for personal use, e.g. to improve visibility of remedies on a Notebook screen. (For example go to font size 12 points).
